Sender, tone, CTA, follow-ups — keep it tight

Tone and CTA type are the two controls that most change output quality with minimal friction. Business type and location are auto-detected from the lead list and editable. Nothing else needed.

Left sidebar to browse all leads · Main panel to review + edit · "Why this email?" on every draft

The sidebar shows all leads with a per-lead status dot (green = ready, amber = needs review, red = failed). Clicking any lead loads their email in the main workspace. Founders approve all at once; operators review one-by-one.

Final gate before emails go out — no surprises

Summary of what's about to happen. Rate limit, schedule, sender identity, follow-up sequence all visible.

The kill switch is also present here. One clear launch button.

Screen 7 of 10 · Campaign monitor

30-second daily check-in — hot leads first, funnel second

Designed to answer "did anything happen?" in one glance. Notification banner surfaces hot leads. Stats row shows KPIs. Funnel and lead list side by side. Export CSV always accessible.

Full lead list — filterable by status, with follow-up due date column

Filter tabs (All / Hot / Warm / Cold) let operators focus. Follow-up due date column tells them what's imminent. "Manual ping" on warm leads gives operators a direct action alongside the automated sequence. Export always available.

Thread

You (Anirban Das)

May 6 · 9:14am

Hi Rania, scaling NLP annotation in-house is expensive — most Dubai AI teams hit this wall at Series A. At Life180 Labs, we handle data labeling and LLM eval as a managed service, so your engineers stay focused on the model. Worth a 20-min call?

Rania Al-Farsi

May 6 · 11:32am

This is timely — we're hitting this exact issue. Can you share more about your LLM eval process? We work with Arabic-language models, wondering if you have experience there.

AI draft

Write manually

Yes, we have experience with Arabic NLP — annotators fluent in MSA and Levantine. Happy to walk you through our eval framework on a quick call. Are you free Thursday or Friday?

Why this draft?

① Addresses Arabic NLP query directly + books call per campaign CTA

Gmail OAuth, send throttle, follow-up toggles, session security

Gemini's addition — this deserves its own screen. The max emails/hour slider is a spam-risk control.

Follow-up toggles let users disable sequences globally. Session-only auth note addresses the "no credential storage" security requirement from the BRD.
